

The MATLAB interface displays two subplots in a 2x1 grid. The top subplot, titled "Vehicle Speed vs Packet Delivery Ratio", shows the relationship between vehicle speed and packet delivery ratio. The bottom subplot, titled "Packet Delivery Ratio Across Vehicles", shows the packet delivery ratio for different vehicle indices. Both plots use blue lines with markers and include grid lines.

Vehicle Speed vs Packet Delivery Ratio

Vehicle Speed (km/h)	Packet Delivery Ratio (%)
20	99.98
40	98.95
60	97.95
80	96.95
100	95.95
120	94.95

Packet Delivery Ratio Across Vehicles

Vehicle Index	Packet Delivery Ratio (%)
1	99.98
2	98.95
3	97.95
4	96.95
5	95.95
6	94.95

Command Window

```
% Vehicle Speed (km/h)
speed = 20:20:120;
% Simulated Packet Delivery Ratio (%)
PDR = [99.98 98.95 97.95 96.95 95.95 94.95];
disp('Vehicle Speed (km/h) Packet Delivery Ratio (%)')
disp([speed' PDR'])
figure
% ----- Graph 1 -----
subplot(2,1,1)
plot(speed,PDR,'-o','LineWidth',2)
title('Vehicle Speed vs Packet Delivery Ratio')
xlabel('Vehicle Speed (km/h)')
ylabel('Packet Delivery Ratio (%)')
grid on
% ----- Graph 2 -----
subplot(2,1,2)
plot(1:length(PDR),PDR,'-s','LineWidth',2)
title('Packet Delivery Ratio Across Vehicles')
xlabel('Vehicle Index')
ylabel('Packet Delivery Ratio (%)')
grid on
```
